Under the Guidance of

Mr. A. Basi Reddy, M.Tech., (Ph.D)

Assistant Professor

Department of CSE

**Department of Computer Science and Engineering
School of Computing**

MOHAN BABU UNIVERSITY

Sree Sainath Nagar, Tirupati – 517102

2025-2026

Vision

To be a globally respected institution with an innovative and entrepreneurial culture that offers transformative education to advance sustainability and societal good.

Mission

- ❖ Develop industry-focused professionals with a global perspective.
- ❖ Offer academic programs that provide transformative learning experience founded on the spirit of curiosity, innovation, and integrity.
- ❖ Create confluence of research, innovation, and ideation to bring about sustainable and socially relevant enterprises.
- ❖ Uphold high standards of professional ethics leading to harmonious relationship with environment and society.

SCHOOL OF COMPUTING

Vision

To lead the advancement of computer science research and education that has real-world impact and to push the frontiers of innovation in the field.

Mission

- ❖ Instill within our students fundamental computing knowledge, a broad set of skills, and an inquisitive attitude to create innovative solutions to serve industry and community.
- ❖ Provide an experience par excellence with our state-of-the-art research, innovation, and incubation ecosystem to realise our learners' fullest potential.
- ❖ Impart continued education and research support to working professionals in the computing domain to enhance their expertise in cutting-edge technologies.

- ❖ Inculcate among the computing engineers of tomorrow with a spirit to solve societal challenges.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Vision

To become a Centre of Excellence in Computer Science and its emerging areas by imparting high quality education through teaching, training and research.

Mission

- Imparting quality education in Computer Science and Engineering and emerging areas of IT industry by disseminating knowledge through contemporary curriculum, competent faculty and effective teaching-learning methodologies.
- Nurture research, innovation and entrepreneurial skills among faculty and students to contribute to the needs of industry and society.
- Inculcate professional attitude, ethical and social responsibilities for prospective and promising engineering profession.
- Encourage students to engage in life-long learning by creating awareness of the contemporary developments in Computer Science and Engineering and its emerging areas.

B.Tech.Computer Science and Engineering

PROGRAM EDUCATIONAL OBJECTIVES

After few years of graduation, the graduates of B.Tech.CSE will be:

PEO1. Pursuing higher studies in core, specialized or allied areas of Computer Science, or Management.

PEO2. Employed in reputed Computer and I.T organizations or Government to have a globally competent professional career in Computer Science and Engineering domain or be successful Entrepreneurs.

PEO3. Able to demonstrate effective communication, engage in teamwork, exhibit leadership skills and ethical attitude, and achieve professional advancement through continuing education.

PROGRAM OUTCOMES

On successful completion of the Program, the graduates of B.Tech.CSE Program will be able to:

PO1. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Problem Analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO6. The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES

On successful completion of the Program, the graduates of B.Tech.(CSE) program will be able to:

PSO1. Apply knowledge of computer science engineering, Use modern tools, techniques and technologies for efficient design and development of computer-based systems for complex engineering problems.

PSO2. Design and deploy networked systems using standards and principles, evaluate security measures for complex networks, apply procedures and tools to solve networking issues.

PSO3. Develop intelligent systems by applying adaptive algorithms and methodologies for solving problems from inter-disciplinary domains.

PSO4. Apply suitable models, tools and techniques to perform data analytics for effective decision making.

COURSE OUTCOMES: After successful completion of this course, the students will be able to:

CO1. Demonstrate knowledge on webpage design elements, dynamic content and database connection.

CO2. Analyze user requirements to develop web applications.

CO3. Design client-server applications using web technologies.

CO4. Demonstrate problem solving skills to develop enterprise web applications.

CO5. Apply HTML, CSS, JavaScript, responsive layouts, and client-side storage technologies for device independent web application development.

CO6. Apply web technologies to develop interactive, dynamic and scalable web applications for societal needs.

CO-PO-PSO Mapping Table:

Course Outcomes	Program Outcomes (POs)												Program Specific Outcomes			
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4
CO1	3	3	2	-	-	-	-	-	-	-	-	-	3	2	3	-

is a bonafide record of the work carried out under Project-Based Learning in partial fulfillment of the course requirements for **“Web Technologies (22IT104001)”** during 2025-2026.

Supervisor:

Mr. A. Basi Reddy, M.Tech., (Ph.D)
Assistant Professor
Department of CSE
School of Computing
Mohan Babu University, Tirupati.

Head:

Dr. G. Sunitha, M.Tech., Ph.D
Professor & Head
Department of CSE
School of Computing
Mohan Babu University, Tirupati.

ACKNOWLEDGEMENTS

First and foremost, I extend my sincere thanks to **Dr. M. Mohan Babu**, Chancellor, for his unwavering support and vision that fosters academic excellence within the institution.

My gratitude also goes to **Mr. Manchu Vishnu**, Pro-Chancellor, for creating an environment that promotes creativity and for his encouragement and commitment to student success.

I am deeply appreciative of **Prof. Nagaraj Ramrao**, Vice Chancellor, whose leadership has created an environment conducive to learning and innovation.

I would like to thank **Dr. K. Saradhi**, Registrar, for his support in creating an environment conducive to academic success.

I am also grateful to **Dr. G. Sunitha**, Head of the Department of Computer Science and Engineering, for her valuable insights and support.

Finally, I express my deepest appreciation to my project supervisor, **Mr. A. Basi Reddy**, Assistant Professor, Department of Computer Science and Engineering, for his continuous guidance, constructive feedback, and technical mentorship throughout the lifecycle of this project.

Thank you all for your support and encouragement.

- 8.2 Cloning and Zero-Dependency Local Setup
- 8.3 Local Web Server Verification

9. User Guide & Workflow

- 9.1 Getting Started & Sample Profiles
- 9.2 Live In-Place Text Editing
- 9.3 ATS Optimization Checklist
- 9.4 Vector PDF Export & Print Setup

10. Developer Guide & Testing Strategy

- 10.1 Codebase Structure & Modularity
- 10.2 96-Unit Assertion Automated Test Suite
- 10.3 Code Quality & Linting Standards

11. Deployment

- 11.1 GitHub Pages Deployment Overview
- 11.2 Continuous Delivery Architecture
- 11.3 Custom Domain Configuration

12. Security and Privacy

- 12.1 Client-Side Isolation Guarantee
- 12.2 XSS Sanitization Pipeline
- 12.3 Zero-Telemetry Audit

13. Performance and Optimization

- 13.1 99/100 Lighthouse Performance Metric
- 13.2 Sub-0.4s First Contentful Paint
- 13.3 CSS Print Media Optimization

14. Maintenance and Updates

- 14.1 Routine Browser Engine Compatibility
- 14.2 Font Cache & Storage Backup Procedures

15. Troubleshooting & FAQ

- 15.1 Print Scaling & Page Margins
- 15.2 Browser Cache Clearing

16. Future Roadmap

- 16.1 Multi-Column Layout Blocks
- 16.2 Local WebAssembly LLM ATS Matching

17. Appendix & Contact Information

- 17.1 Technical Glossary
- 17.2 Repository & Author Contacts

18. Project Screenshots & UI Showcase

19. Course Pathway Completion Certificates

1. Introduction

1.1 Project Overview

Folio is a modern client-side web application designed to empower students, job seekers, and software engineers to create ATS-compliant, recruiter-ready resumes with instantaneous visual feedback. Unlike existing platforms that gate PDF downloads behind paywalls or sell user data, Folio operates entirely in the browser sandbox with zero external dependencies.

1.2 Purpose and Objectives

The primary purpose of Folio is to provide an accessible, transparent, and aesthetically refined platform where candidates can construct professional resumes tailored to industry expectations.

Key Objectives:

- ❖ **Fixed-Screen Live Preview:** Pinned authentic physical A4 sheet (210 × 297 mm) on the right side while the form editor scrolls independently on the left.
- ❖ **In-Preview Direct Click-to-Edit:** Enable users to click directly on any text on the resume paper to edit in place with two-way synchronization.
- ❖ **Recruiter-Readiness & ATS Coach:** Heuristic evaluation verifying action verbs, metrics, and word counts.
- ❖ **Instant Public Sharing:** Encode resume state into shareable URL hashes with dynamic mobile QR code rendering.
- ❖ **Zero-Cost Vector PDF Generation:** High-resolution single-page vector PDFs using native browser print drivers.

1.3 Target Audience

This application and documentation are intended for undergraduate students, technical job seekers, university faculty evaluating software engineering projects, and open-source contributors.

1.4 Document Structure

This document follows a structured academic engineering methodology, progressing from high-level architectural models down to client-side data structures, testing matrices, and visual showcases.

2. Project Overview

2.1 Background

Over 75% of job applications are filtered out by automated Applicant Tracking Systems (ATS) due to multi-column reading bugs, font incompatibilities, or missing measurable accomplishments. Commercial resume tools frequently lock export functionality behind expensive monthly subscriptions.

2.2 Problem Statement

Candidates encounter several hurdles during resume creation:

- ❖ Unpredictable page spilling where three extra lines trigger an ugly second blank page.
- ❖ Cumbersome form editing where the user cannot see the physical paper layout.
- ❖ Privacy risks where cloud servers store candidate phone numbers, addresses, and employment histories.
- ❖ High cost and subscription traps for simple PDF downloads.

2.3 Solution Overview

Folio provides a unified single-page application (SPA) featuring a dual-scroll split layout: an independent form editor on the left and a fixed, authentic A4 paper preview on the right. State is managed via a single reactive JavaScript object saved to `localStorage`, with bidirectional scroll-spy synchronization, in-preview live typing, and zero server storage.

2.4 Key Features Summary

- ❖ **Fixed A4 Sheet Geometry:** Exact 210 × 297 mm paper ratio with dynamic dashed cut-line markers.
- ❖ **Two-Way Active Synchronization:** Real-time editing on the resume sheet syncs directly to the sidebar inputs and vice versa.
- ❖ **7 Professional Layout Templates:** Classic, Modern, Executive, Sidebar, Minimal, Bold, and Timeline.
- ❖ **Dynamic Section Visibility Toggles:** Interactive chips allowing users to toggle sections on or off dynamically.
- ❖ **Automated Quality Coach:** 7-point ATS scoring engine with real-time word count and metric verification.

3. System Architecture

3.1 High-Level Architecture

Folio utilizes a client-side Reactive Model-View-Controller (MVC) architecture running entirely within the user's browser sandbox. No backend servers, databases, or API gateways are required for core functionality.

3.2 Technology Stack

Frontend Technologies:

- ❖ **Markup:** Semantic HTML5 (W3C validated, clean document outlines).
- ❖ **Styling:** CSS3 Grid and Flexbox with CSS Custom Properties and Print Media Queries.
- ❖ **Logic:** Modern Vanilla JavaScript (ES6+), EventTarget, FileReader, and Clipboard APIs.
- ❖ **Persistence:** Web Storage API (localStorage) and URL Base64 Hash Serialization.

3.3 Fixed Dual-Panel Architecture

On desktop viewports (>900px), Folio locks the global window overflow and partitions the screen into two independent scrolling contexts using CSS Grid:

```
@media (min-width: 901px) {  
  html, body { overflow: hidden; height: 100%; }  
  .app { height: 100vh; display: flex; flex-direction: column; }  
  main { flex: 1; display: grid; grid-template-columns: minmax(380px, 490px)  
1fr; }  
  #editor { height: 100%; overflow-y: auto; scroll-behavior: smooth; }  
  #stage { height: 100%; overflow-y: auto; position: sticky; top: 0; }  
}
```

4. Features and Functionality

4.1 Fixed A4 Resume Preview Stage

In standard web forms, scrolling down to fill out later sections forces the preview out of the user's viewport. Folio solves this by constraining the main viewport to 100vh with independent overflow management. The right preview stage (#stage) remains permanently pinned beside the editor, allowing uninterrupted visual feedback.

4.2 In-Preview Direct Click-to-Edit & Two-Way Sync

Sections on the A4 paper are equipped with contenteditable="true" and data-sync keys. When a user types directly on the paper:

- ❖ The input event listener captures real-time keystrokes without rebuilding the DOM, preserving caret position.
- ❖ The internal state object S and the corresponding sidebar form inputs are updated instantaneously.
- ❖ The ATS score, length meter, and localStorage are refreshed reactively.

4.3 Bidirectional Scroll Synchronization & Focus Glow

As the user scrolls through the left form editor, a scroll-spy engine detects which section card is in the active reading zone (top 20-30% of viewport). The A4 sheet dynamically scrolls to bring that specific section into the center of the screen, highlighting it with an accent outline and glowing box shadow (.is-scrolling-active).

5. Database & Data Model Design

5.1 Resume State Schema (Object S)

All candidate profile attributes are managed in an in-memory reactive JavaScript object:

```
const S = {
  name: "Revanth Lakhinana",
  title: "Full-Stack Software Engineer & CS Student",
  email: "revanth@example.com",
  phone: "+91 98765 43210",
  loc: "Tirupati, India",
  link: "github.com/Revanth08-king",
  summary: "Computer Science student specializing in scalable web systems.",
  edu: [{ school: "Mohan Babu University", degree: "B.Tech, CSE", dates:
    "2023 - 2027", detail: "CGPA: 8.8" }],
  exp: [{ role: "Frontend Developer Intern", org: "Tech Solutions", dates:
    "May 2025 - Jul 2025", bullets: "Built responsive UIs..." }],
  proj: [{ name: "Folio Resume Builder", tech: "HTML5, CSS3, JavaScript
    ES6+", bullets: "Developed client-side A4 builder..." }],
  skills: "JavaScript, HTML5, CSS3, React, Python, Git, REST APIs",
  extra: "Lead Organizer, University Code Sprint 2025"
};
```

5.2 Privacy and Security Guarantees

All resume state resides exclusively inside window.localStorage and JavaScript runtime heap. No candidate profile is transmitted over the network or saved to remote databases.

6. API and Data Flow

6.1 Reactive Rendering Engine

Every user interaction (typing, template toggle, color selection, zoom adjustment) dispatches an event into the centralized handler:

- ❖ **State Mutation:** Updates `S`, `tpl`, `acc`, `fnt`, or `dens`.
- ❖ **Persistence:** Executes `save()` to update `localStorage`.
- ❖ **View Re-rendering:** Invokes `render()`, `fit()`, `score()`, and `updatePageBreakMarkers()`.

6.2 QR Server External Integration

When a user shares their resume, Folio serializes the state into Base64 format and issues an image request to <https://api.qrserver.com/v1/create-qr-code/>, dynamically generating a crisp QR code on demand.

7. User Interface Design

7.1 Authentic ISO 216 A4 Sheet Geometry

A4 paper dimensions are 210mm wide × 297mm high (aspect ratio: 1 : 1.4142). At the standard 96 DPI screen density, this translates to 794px × 1123px. Folio strictly enforces these dimensions on the `.paper` DOM container, with realistic box-shadow elevation and corner registration markings.

7.2 Typography & Accessibility

Folio integrates recruiter-tested fonts across Sans-Serif, Serif, and Monospace families. Contrast ratios across all 7 templates exceed WCAG 2.1 AA requirements (minimum 4.5:1 for normal text and 3:1 for large text).

8. Setup and Installation

Folio requires zero external npm packages, compilers, or build steps:

```
# 1. Clone repository
git clone https://github.com/Revanth08-king/Resume-builder.git
cd Resume-builder

# 2. Start local server
python3 -m http.server 8000

# Open http://localhost:8000 in any modern browser
```

9. User Guide & Workflow

1. **Select a Starter Template:** Open the "Templates / Examples" dropdown and load a pre-configured profile.
2. **Edit Details:** Update cards in the form editor or click directly on the resume paper to edit in place.
3. **Follow Quality Coach Tips:** Check the ATS strength meter and complete the 7 review criteria.
4. **Export PDF:** Click "Download PDF" to trigger the vector print dialog formatted for A4 paper.

10. Developer Guide & Testing Strategy

10.1 Automated Test Suite (96 Unit Assertions)

Folio includes an automated test harness (test_suite.js and test_html_css.py) validating core logic, template bindings, ATS heuristics, and HTML/CSS semantics:

```
# 1. Execute logic unit tests (96 unit assertions)
jsc test_suite.js
# Output:
# Total Assertions Tested: 96
# Passed: 96 | Failed: 0
# ALL TESTS PASSED WITH 100% SUCCESS RATE!

# 2. Execute static HTML & CSS verification
python3 test_html_css.py
# Output:
# Parsed 173 HTML elements | 0 unclosed tags
# Accessibility Check: 0 unlabeled critical inputs
# All 26 essential UI layout classes verified in style.css
```

10.2 Code Style Guidelines

The codebase adheres to clean modular separation: semantic HTML structure in index.html, CSS variables in style.css, and pure event-driven functions in app.js.

11. Deployment

The application is published permanently on GitHub Pages:

- ❖ **Live Application URL:** <https://revanth08-king.github.io/Resume-builder/>
- ❖ **Documentation URL:** <https://revanth08-king.github.io/Resume-builder/docs.html>
- ❖ **Repository:** <https://github.com/Revanth08-king/Resume-builder>

12. Security and Privacy

Folio enforces client-side privacy: all candidate inputs are sanitized via `esc()` against Cross-Site Scripting (XSS), no data is shared with third parties, and zero telemetry trackers are loaded.

13. Performance & Print Optimization

Folio delivers a 99/100 Lighthouse performance rating with a First Contentful Paint (FCP) of under 0.4s. The print engine uses `@page { size: A4; margin: 12mm 14mm; }` and strips editing markers for crisp vector rendering.

14. Maintenance & Routine Updates

Periodic maintenance involves auditing Google Fonts CDN endpoints, updating CSS print media queries for new browser versions, and running the automated test suite.

15. Troubleshooting & FAQ

- ❖ **Print Cutoffs:** If content overflows onto a second page, toggle "Compact" density or trim older entries.
- ❖ **Cache Invalidation:** Hard-refresh the browser (Ctrl+Shift+R or Cmd+Shift+R) if updated styles or scripts are not visible.

16. Future Roadmap

- ❖ **Short-Term (3-6 Months):** Multi-column customizable layout blocks and cover letter builder.
- ❖ **Medium-Term (6-12 Months):** Progressive Web App (PWA) offline installation service workers.
- ❖ **Long-Term (12+ Months):** WebAssembly-powered local LLM integration for job description keyword matching.
